WASHINGTON STATE Charter School Commission

Students • Innovation - Transparency

## ACADEMIC PERFORMANCE FRAMEWORK METHODOLOGY

Revised June 2021, applicable starting with the 2021-22 school year.

## Introduction

The Academic Performance Framework (APF) includes measures that allow the Washington State Charter School Commission (the Commission) to evaluate charter school academic performance to answer the question: Is the academic program a success? In schools that meet or exceed standards, student learning-the central purpose of every school-is taking place, and the Commission can consider the academic program to be effective.

The Commission collaborated with the National Association of Charter School Authorizers (NACSA), in partnership with Public Impact, to develop the APF. The starting point for the draft was NACSA's Core Academic Performance Framework, which is based on NACSA's Principles \& Standards. Development of the APF included a review of publicly available information related to Washington State charter laws, rules, and regulations. The APF was revised in April 2018 and June 2021 to reflect changes in the state accountability system and Commission performance expectations for charter school academic performance.

## Rating Scale

As outlined in WAC 108-30-030, for each APF measure, a charter school receives one of four ratings: "Exceeds Standard," "Meets Standard," "Does Not Meet Standard," or "Falls Far Below Standard."

- Exceeds Standard - Schools that earn this rating exhibit exemplary performance. They are on track for charter renewal and could warrant consideration by the Commission for expansion or replication.
- Meets Standard - Schools in this rating category meet the minimum expectations for charter school performance. They are performing well and are on track for charterrenewal.
- Does Not Meet Standard - Schools in this category fail to meet minimum expectations for academic performance. The Commission could consider closer monitoring, and their status for renewal could be in question.
- Falls Far Below Standard - Schools that fall into this rating category are on par with the lowestperforming schools in the state and may be subject to non-renewal or revocation.

The Commission will review charter school performance against the APF annually and at the time of renewal. The results will be used by the Commission to make decisions about renewal, revocation, and corrective action plans. In addition to the Commission's oversight of charter school performance, the Office of Superintendent of Public Instruction (OSPI) uses the state's Washington School Improvement

## Indicators and measures

The Academic Performance Framework (APF) evaluates schools based on: state and federal accountability, proficiency rates, student growth, career and college readiness, subgroup performance, comparisons to district schools charter schools' students would otherwise attend, and school-specific goals.

| INDICATOR | MEASURE |  | Weight |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | K-8 | HS |
| 1. State and Federal <br> Accountability- <br> Washington School Improvement <br> Framework | 1a.1. All Students Framework Score |  | 25\% | 25\% |
|  | 1a.2. Subgroup Framework Scores |  | 25\% | 25\% |
| 2. Geographic Comparisons (Assigned School Comparison) | 2a.1. Proficiency | 2a.2. Subgroup Proficiency | 10\% | 10\% |
|  | 2b.1. All student growth | 2b.2. Subgroup growth | 20\% | NA |
|  | 2c.1. Graduation Rate | 2c.2. Subgroup Graduation Rate | NA | 15\% |
|  | 2d. 1. EL. Progress | 2d.2. Subgroup EL Progress | 2.5\% | 2.5\% |
|  | 2e.1. Regular Attendance | 2e.2. Subgroup Regular Attendance | 2.5\% | 2.5\% |
|  | 2f.1. 9th Graders on Track | 2f.2. 9th Graders on Track | NA | 2.5\% |
|  | 2g.1. Dual Credit | 2g.2. Dual Credit | NA | 2.5\% |
| 3. School-specific goals | School-specific goal(s) |  | 15\% | 15\% |

Note: 9th Graders on Track and Dual Credit are evaluated for all schools serving 9th grade.
Weights across all indicators total to $100 \%$.
Note on missing data: If a school does not have at least one year of SBA data or if one or more of the three indicators is missing, an overall tier rating will not be calculated.

## ACADEMIC PERFORMANCE FRAMEWORK INDICATORS AND MEASURES

This section provides background information, data requirements, and methodology steps for each of the measures in the APF.

## Indicator 1: State accountability system

The Washington State Board of Education (SBE) and the Office of the Superintendent of Public Instruction (OSPI) developed the Washington School Improvement Framework as part of its ESSA Consolidated Plan to evaluate and track the performance of all schools in the state. ${ }^{1}$ To align charter school accountability expectations with the state accountability system, the Washington School Improvement Framework serves as the foundation of the APF, supplemented by additional measures required by WAC 108-30-020(a).

The Washington School Improvement Framework evaluates all students and targeted subgroups ${ }^{2}$ on proficiency, growth, graduation rate, English learner (EL) progress, attendance, ninth grade credit attainment, and dual credit. Each year, the state calculates up to 10 scores for each school that represent statewide ranking (deciles) for all students and each subgroup with a sufficient number of students to meet reporting requirements. The scores are based on up to three years of performance.

## Additional Information/Considerations:

Because the state framework scores are based on up to three years of data, the Commission will need to consider the issue of "overweighting" data from some years during a renewal review. When four years of results are considered for a charter renewal review, performance from some years may count as many as three times. It is possible, as well, that data from years before the current charter contract term are included in the review.

Using a hypothetical example, (see table below) in 2024 a charter school is in the fifth year of the charter term, and the Commission is reviewing academic performance from the first four years of the charter contract term—2020 through 2023. Using the Washington State Improvement Framework, based on three years of data, performance in the first year of the charter term (2020) "counts" for 50\% of the evaluation because 2020 results are included in the Framework scores for 2020, 2021, and 2022. The most recent year counts only for $8 \%$ because 2023 results are only included in the 2023 3-year Framework score. Additionally, years before the charter term (2018 and 2019) are also included in the renewal review.

[^0]

## Measure 1a.1. Washington School Improvement Framework Score - All

## Students

## Necessary data

- Washington School Improvement Framework scores for the currentyear

## Targets

1a.1. State Accountability: Washington School Improvement Framework Score - All Students Is the charter school meeting performance expectations based on state accountability results?

## Exceeds Standard:

$\square$ Charter school receives an all student Framework Score of 8, 9 or 10.

## Meets Standard:

Charter school receives an all student Framework Score of 6 or 7.
## Does Not Meet Standard:

$\square$ Charter school receives an all student Framework Score of 4 or 5.
Falls Far Below Standard:Charter school receives an all student Framework Score of 1, 2 or 3.

## Measure 1a.2. Washington School Improvement Framework Score - Subgroups

## Necessary data

- Washington School Improvement Framework scores for each reported subgroup for the current year

## Additional Information/Considerations:

OSPI includes the following subgroups in the Washington School Improvement Framework: American Indian/Alaskan Native, Asian, black/African American, Hispanic/LatinX, native Hawaiian/other Pacific Islander, two or more races, white, English learners, low income, students with disabilities. Results for fewer than 20 students are not released or included in Commission analyses.

## Targets

1a.2. State Accountability: Washington School Improvement Framework Score - Subgroups Are students in reported subgroups in the charter school meeting performance expectations based on state accountability results?

## Exceeds Standard:

Charter school subgroup receives a Framework Score of 8, 9 or 10.
Meets Standard:
Charter school subgroup receives a Framework Score of 6 or 7.
Does Not Meet Standard:
$\square$ Charter school subgroup receives a Framework Score of 4 or 5.
Falls Far Below Standard:
$\square$ Charter school subgroup receives a Framework Score of 1, 2 or 3.

## Indicator 2: Geographic Comparisons (Assigned School Comparison)

Charter schools are compared to district schools that charter school students would otherwise attend through the use of an Assigned School Comparison (ASC). Charter schools are rated based on the difference between the charter school and ASC average performance.

## Methodology for identifying ASC schools

Each of the measures within Indicator 2 relies on the identification of the district schools that charter schools are "assigned" to, based on students' addresses of residence.

## Necessary data

- Grade and street address for all students enrolled in the charter school during the month of the spring state assessment administration.

## Methodology

Step 1: For each unique student street address, enter the address into the resident district's online boundary map tool. ${ }^{3}$
Step 2: Record the school name and corresponding district school id for each address submitted by the charter school.
Step 3: Tally the total number of students by grade that is "assigned" to each district school identified in Steps 1 and 2.

## Sample: Table 1

| "Assigned" School Name | Students Assigned by Grade Level, School Year 2017-18 |  |  | Total Students |
| :---: | :---: | :---: | :---: | :---: |
|  | Grade 3 | Grade 4 | Grade 5 |  |
| School 1 | 12 | 13 | 9 | 34 |
| School 2 | 7 | 3 | 4 | 14 |
| School 3 | 6 | 6 | 1 | 13 |
| School 4 | 4 | 8 | 1 | 13 |
| School 5 | 4 | 5 | 1 | 10 |
| School 6 | 4 | 2 | 3 | 9 |
| School 7 | 6 | 2 | 0 | 8 |
| School 8 | 4 | 4 | 0 | 8 |
| School 9 | 3 | 2 | 3 | 8 |
| School 10 | 4 | 1 | 1 | 6 |
| School 11 | 2 | 1 | 2 | 5 |
| School 12 | 0 | 2 | 0 | 2 |
| School 13 | 0 | 1 | 0 | 1 |
| Total | 56 | 50 | 25 | 131 |

[^1]In the table above, the district schools that charter school students would otherwise attend are labeled "assigned" school. In each of the measures described below, charter school performance (grade-level proficiency, grade-level growth, sub-group proficiency, sub-group growth, etc.) is compared to the ASC, which is the weighted average of the performance of the assigned schools. For an example of the weighting calculation, see the Appendix.

## Measure 2a.1. Proficiency—ASC Comparison to district schools that charter school students would otherwise attend

## Necessary data

For charter school and the district schools charter school students would otherwise attend:

- Number of students by grade "assigned" to each ASC district school (see Table 1 for example)
- Percentage of students proficient in ELA by grade
- Percentage of students proficient in math bygrade

## Methodology (carried out separately for ELA and math)

Step 1: Multiply the proficiency rate for each grade in each assigned school by the number of students who would otherwise attend the school in that grade. Sum the products for all assigned schools and grades and divide by the total number of students in the charter school. The result is the Assigned School Composite (ASC).
Step 2: Calculate the difference between the charter school percentage of proficient students and the ASG average percentage of proficient students in the grades served by the charter school.
Step 3: Apply targets from the table below to assign performance category.

## Targets (apply separately to all tested subjects)

## 2a. 1 Proficiency - Comparison to assigned schools

How are charter school students performing on state assessments compared to the district schools that students would otherwise attend if they did not attend the charter school?

## Exceeds Standard:

$\square$ School proficiency rate is 10 or more percentage points above the Assigned School Comparison
average.

## Meets Standard:

$\square$ School proficiency rate is equal to or is up to 9 percentage points above the Assigned School Comparison average.

## Does Not Meet Standard:

$\square$ School proficiency rate is up to 9 percentage points below the Assigned School Comparison average.

## Falls Far Below Standard:

$\square$ School proficiency rate is 10 or more percentage points below the Assigned School Comparison average.

## Measure 2a.2. Subgroup Proficiency—ASC Comparison to district schools that charter school students would otherwise attend

## Necessary data

For charter school and district schools, charter school students would otherwise attend:

- Number of students by grade "assigned" to each ASC district school (see Table 1 for example)
- Percentage of students proficient in each eligible subgroup in ELA by grade.
- Percentage of students proficient in each eligible subgroup in math by grade.

Note: "Eligible" subgroups meet OSPI reporting standards for the number of students tested (20).

## Methodology (carried out separately for ELA and math for each eligible subgroup)

Step 1: Multiply the subgroup proficiency rate for each grade in each assigned school by the number of students who would otherwise attend the school in that grade. Sum the products for all assigned schools and grades and divide by the total number of students in the charter school. The result is the Assigned School Composite (ASC).
Step 2: Calculate the difference between the charter school and ASC percentages of proficient students in the subgroup.
Step 3: Apply targets from the table below to assign performance category.

Targets (applied separately to all tested subjects for all eligible subgroups)

## 2a.2. Subgroup proficiency - Comparison to assigned schools

How are charter school students in subgroups performing on state assessments compared to the district schools that students would otherwise attend if they did not attend the charter school?

## Exceeds Standard:

$\square$ School subgroup proficiency rate is 10 or more percentage points above the Assigned School Comparison average.

## Meets Standard:

$\square$ School subgroup proficiency rate is equal to or is up to or equal to 9 points above the Assigned School Comparison average.

Does Not Meet Standard:
$\square$ School subgroup proficiency rate is up to or equal to 9 percentage points below the Assigned School Comparison average.

## Falls Far Below Standard:

$\square$ School subgroup proficiency rate is 10 or more percentage points below the Assigned School Comparison average.

## Measure 2b.1. Student Growth - All Students - ASC Comparison to district schools that charter school students would otherwise attend

Median growth percentiles are calculated by OSPI using two years of state assessment data. Results are reported for grades 4 through 8 for all schools serving a range of grades from 3 through 8. (Growth is not reported for third grade since two years of assessment data are needed and second grade is not a tested grade.)

## Necessary data

For charter school and district schools charter school students would otherwise attend:

- Number of students "assigned" to each ASC district school (see Table 1 for example)
- Median growth percentile (MGP) - ELA
- Median growth percentile (MGP) - math

## Methodology (carried out separately for ELA and math)

Step 1: Multiply the MGP for each assigned school by the number of students who would otherwise attend the school. Sum the products for all assigned schools and divide by the total number of students in the charter school. The result is the Assigned School Composite (ASC).
Step 2: Calculate the difference between the charter school MGP and the ASC MGP.
Step 3: Apply targets from the table below to assign performance category.

## Targets (applied separately to both ELA and math)

## 2b.1. Student Growth- All Students - Comparison to assigned schools

How are charter school students meeting growth expectations compared to the district schools that students would otherwise attend if they did not attend the charter school? (based on subgroup median growth percentiles (MGPs))

## Exceeds Standard:

$\square$ School MGP is 5 or more points above the Assigned School Comparison median.

## Meets Standard:

$\square$ School MGP is equal to or up to 4 percentage points above the Assigned School Comparison median.
Does Not Meet Standard:
$\square$ School MGP is up to 4 points below the Assigned School Comparison median.
Falls Far Below Standard:
$\square$ School MGP is 5 or more points below the Assigned School Comparison median.

## Measure 2b.2. Student Growth—Subgroups—ASC Comparison to district schools that charter school students would otherwise attend

Median growth percentiles are calculated by OSPI using two years of state assessment data. Results are reported for grades 4 through 8 for all schools serving a range of grades from 3 through 8. (Growth is not reported for third grade since two years of assessment data are needed and second grade is not a tested grade.)

## Necessary data

For charter school and district schools charter school students would otherwise attend:

- Number of students "assigned" to each ASC district school (see Table 1 for example)
- School median growth percentile (MGP) for all eligible subgroups - ELA
- School median growth percentile (MGP) for all eligible subgroups - Math

Note: "Eligible" subgroups meet OSPI reporting standards for the number of students tested.

## Methodology (carried out separately for ELA and math for all eligible subgroups)

Step 1: Multiply the subgroup MGP for each assigned school by the number of students who would otherwise attend the school. Sum the products for all assigned schools and divide by the total number of students in the charter school. The result is the Assigned School Composite (ASC).

Step 2: Calculate the difference between the charter school subgroup MGP and the ASC subgroup MGP.
Step 3: Apply targets from the table below to assign performance category.

Targets (applied separately to both ELA and math for each eligible subgroup)

> 2b2. Student Growth—Subgroups-Comparison to assigned schools How are charter school student subgroups meeting growth expectations compared to the district schools that students would otherwise attend if they did not attend the charter school? (based on subgroup median growth percentiles (MGPs))

## Exceeds Standard:

$\square$ School subgroup MGP is 5 or more points above the Assigned School Comparison median.

## Meets Standard:

School subgroup MGP is equal to or up to 4 points above the Assigned School Comparison median.Does Not Meet Standard:
$\square$ School subgroup MGP is up to or equal to 4 points below the Assigned School Comparison median.

## Falls Far Below Standard:

$\square$ School subgroup MGP is 5 or more points below the Assigned School Comparison median.

## Measure 2c.1. Graduation rate—All students—ASC Comparison to district schools that charter school students would otherwise attend

## Necessary data

For charter school and district schools charter school students would otherwise attend:

- Number of students "assigned" to each ASC district school (see Table 1 for example)
- Adjusted cohort graduation rate reported in the Washington School Improvement Framework

## Methodology

Step 1: Multiply the adjusted cohort graduation rate for each assigned school by the number of students who would otherwise attend the school. Sum the products for all assigned schools and divide by the total number of students in the charter school. The result is the Assigned School Composite (ASC).

Step 2: Calculate the difference between the charter school adjusted cohort graduation rate and the ASC adjusted cohort graduation rate.
Step 3: Apply targets from the table below to assign performance category.

## Targets

## 2c.1. Graduation rate - All students - Comparison to assigned schools

How are charter school student graduation rates compared to the district schools that students would otherwise attend if they did not attend the charter school?

## Exceeds Standard:

$\square$ Charter school graduation rate is 10 or more percentage points above the Assigned School Comparison average.
Meets Standard:Charter school graduation rate is equal to or up to 9 percentage points above the Assigned School Comparison average.

## Does Not Meet Standard:

Charter school graduation rate is up to 9 percentage points below the Assigned School Comparison average.
Falls Far Below Standard:
$\square$ Charter school graduation rate is 10 or more percentage points below the Assigned School Comparison average.

## Measure 2c.2. Graduation rate - Subgroup - ASC Comparison to district schools that charter school students would otherwise attend

## Necessary data

For charter school and district schools charter school students would otherwise attend:

- Number of students "assigned" to each ASC district school (see Table 1 for example)
- Subgroup graduation rates for all eligible subgroups reported in the Washington School Improvement Framework
Note: "Eligible" subgroups meet OSPI reporting standards for the number of students tested.

## Methodology (carried out separately for each eligible subgroup)

Step 1: Multiply the subgroup graduation rate for each assigned school by the number of students who would otherwise attend the school. Sum the products for all assigned schools and divide by the total number of students in the charter school. The result is the Assigned School Composite (ASC).
Step 2: Calculate the difference between the charter school subgroup adjusted cohort graduation rate and the ASC subgroup adjusted cohort graduation rate.

Step 3: Apply targets from the table below to assign performance category.

```
Targets
    2c.2. Graduation rate - Subgroup - Comparison to assigned schools
    How do charter school student subgroup graduation rates compare to the district schools that
    students would otherwise attend if they did not attend the charter school?
    Exceeds Standard:
    \square ~ C h a r t e r ~ s c h o o l ~ s u b g r o u p ~ g r a d u a t i o n ~ r a t e ~ i s ~ 1 0 ~ o r ~ m o r e ~ p e r c e n t a g e ~ p o i n t s ~ a b o v e ~ t h e ~ A s s i g n e d ~ S c h o o l
    Comparison average.
Meets Standard:
\square \mp@code { C h a r t e r ~ s c h o o l ~ s u b g r o u p ~ g r a d u a t i o n ~ r a t e ~ e q u a l s ~ o r ~ i s ~ u p ~ t o ~ 9 ~ p e r c e n t a g e ~ p o i n t s ~ a b o v e ~ t h e ~ A s s i g n e d }
School Comparison average.
Does Not Meet Standard:
\square \mp@code { C h a r t e r ~ s c h o o l ~ s u b g r o u p ~ g r a d u a t i o n ~ r a t e ~ i s ~ u p ~ t o ~ 9 ~ p e r c e n t a g e ~ p o i n t s ~ b e l o w ~ t h e ~ A s s i g n e d ~ S c h o o l }
Comparison average.
Falls Far Below Standard:
\square \text { Charter school subgroup graduation rate is 10 or more percentage points below the Assigned School}
Comparison average.
```

## Measure 2d.1. EL Progress - ASC Comparison to district schools that charter school students would otherwise attend

Percentage of students who are making enough progress to transition out of the program within at most six years.

## Necessary data

For charter school and district schools charter school students would otherwise attend:

- Number of students "assigned" to each ASC district school (see Table 1 for example)
- English Learner (EL) progress rates

## Methodology

Step 1: Multiply the EL progress rate for each assigned school by the number of students who would otherwise attend the school. Sum the products for all assigned schools and divide by the total number of students in the charter school. The result is the Assigned School Composite (ASC).

Step 2: Calculate the difference between the charter school EL progress rate and the ASC EL progress rate.
Step 3: Apply targets from the table below to assign performance category.

## Targets

2d.1. EL Progress - Comparison to assigned schools
How does charter school student EL progress compare to the district schools that students would otherwise attend if they did not attend the charter school?

## Exceeds Standard:

$\square$ Charter school performance is 10 or more percentage points above the Assigned School Comparison average.

## Meets Standard:

$\square$ Charter school performance equals or is up to 9 percentage points above the Assigned School Comparison average.

Does Not Meet Standard:
Charter school performance is up to 9 percentage points below the Assigned School Comparison average.

## Falls Far Below Standard:

$\square$ Charter school performance is 10 or more percentage points below the Assigned School Comparison average.

## Measure 2d.2. EL Progress—Subgroup—ASC Comparison to district schools that charter school students would otherwise attend

Percentage of students who are making enough progress to transition out of the program within at most six years.

## Necessary data

For charter school and district schools charter school students would otherwise attend:

- Number of students "assigned" to each ASC district school (see Table 1 for example)
- Subgroup EL progress rates for all eligible subgroups reported in the Washington School Improvement Framework
Note: "Eligible" subgroups meet OSPI reporting standards for the number of students tested.

## Methodology (carried out separately for each eligible subgroup)

Step 1: Multiply the subgroup EL progress rate for each assigned school by the number of students who would otherwise attend the school. Sum the products for all assigned schools and divide by the total number of students in the charter school. The result is the Assigned School Composite (ASC).

Step 2: Calculate the difference between the charter school subgroup EL progress rate and the ASC subgroup EL progress rate.

Step 3: Apply targets from the table below to assign performance category.

## Targets

## 2d.2. EL Progress - Subgroup - Comparison to assigned schools

How does charter school student subgroup EL progress compare to the district schools that students would attend if they did not attend the charter school?

## Exceeds Standard:

$\square$ Charter school subgroup performance is 10 or more percentage points above the Assigned School Comparison average.
Meets Standard:
$\square$ Charter school subgroup performance equals or is up to 9 percentage points above the Assigned School Comparison average.

Does Not Meet Standard:
$\square$ Charter school subgroup performance is up to 9 percentage points below the Assigned School Comparison average.

Falls Far Below Standard:
$\square$ Charter school subgroup performance is 10 or more percentage points below the Assigned School Comparison average.

## Measure 2e.1. Regular Attendance—ASC Comparison to district schools that charter school students would otherwise attend

Percentage of students attending 90\% or more school days.

## Necessary data

For charter school and district schools charter school students would otherwise attend:

- Number of students "assigned" to each ASC district school (see Table 1 for example)
- Regular attendance rate

## Methodology

Step 1: Multiply the regular attendance rate for each assigned school by the number of students who would otherwise attend the school. Sum the products for all assigned schools and divide by the total number of students in the charter school. The result is the Assigned School Composite (ASC).

Step 2: Calculate the difference between the charter school regular attendance rate and the ASC regular attendance rate.

Step 3: Apply targets from the table below to assign performance category.

## Targets

## 2e.1. Regular Attendance - Comparison to assigned schools <br> How does charter school student regular attendance compare to the district schools that students would otherwise attend if they did not attend the charter school?

## Exceeds Standard:

Charter school performance is 10 or more percentage points above the Assigned School Comparison average.

## Meets Standard:

$\square$ Charter school performance equals or is up to 9 percentage points above the Assigned School Comparison average.

Does Not Meet Standard:
Charter school performance is up to 9 percentage points below the Assigned School Comparison average.
Falls Far Below Standard:
$\square$ Charter school performance is 10 or more percentage points below the Assigned School Comparison average.

## Measure 2e.2. Regular Attendance—Subgroup-ASC Comparison to district schools that charter school students would otherwise attend

Percentage of students attending 90\% or more school days.

## Necessary data

For charter school and district schools charter school students would otherwise attend:

- Number of students "assigned" to each ASC district school (see Table 1 for example)
- Subgroup regular attendance rates for all eligible subgroups reported in the Washington School Improvement Framework
Note: "Eligible" subgroups meet OSPI reporting standards for the number of students tested.

## Methodology (carried out separately for each eligible subgroup)

Step 1: Multiply the subgroup regular attendance rate for each assigned school by the number of students who would otherwise attend the school. Sum the products for all assigned schools and divide by the total number of students in the charter school. The result is the Assigned School Composite (ASC).
Step 2: Calculate the difference between the charter school subgroup regular attendance rate and the ASC subgroup regular attendance rate.
Step 3: Apply targets from the table below to assign performance category.

## Targets

## 2e.2. Regular Attendance - Subgroup - Comparison to assigned schools

How does charter school student subgroup regular attendance compare to the district schools that students would otherwise attend if they did not attend the charter school?

## Exceeds Standard:

Charter school subgroup performance is 10 or more percentage points above the Assigned School Comparison average.

## Meets Standard:

$\square$ Charter school subgroup performance equals or is up to 9 percentage points above the Assigned School Comparison average.
Does Not Meet Standard:
$\square$ Charter school subgroup performance is up to 9 percentage points below the Assigned School Comparison average.

Falls Far Below Standard:
$\square$ Charter school subgroup performance is 10 or more percentage points below the Assigned School Comparison average.

## Measure 2f.1. 9th Grade on Track—ASC Comparison to district schools that charter school students would otherwise attend

Percentage of first time 9th graders who earned all credits attempted.

## Necessary data

For charter school and district schools charter school students would otherwise attend:

- Number of students "assigned" to each ASC district school (see Table 1 for example)
- 9th grade on track rates

## Methodology

Step 1: Multiply the 9th grade on track rate for each assigned school by the number of students who would otherwise attend the school. Sum the products for all assigned schools and divide by the total number of students in the charter school. The result is the Assigned School Composite (ASC).
Step 2: Calculate the difference between the charter school $9^{\text {th }}$ grade on track rate and the ASC $9^{\text {th }}$ grade on track rate.

Step 3: Apply targets from the table below to assign performance category.
Note: Applies to all schools serving students in $9^{\text {th }}$ grade.

## Targets

## 2f.1. 9th Grade on Track (HS) - Comparison to assigned schools

How do charter school students 9th grade on track (HS) rates compare to the district schools that students would otherwise attend if they did not attend the charter school?

## Exceeds Standard:

$\square$ Charter school performance is 10 or more percentage points above the Assigned School Comparison average.
Meets Standard:Charter school performance equals or is up to 9 percentage points above the Assigned School Comparison average.

Does Not Meet Standard:
$\square$ Charter school performance is up to 9 percentage points below the Assigned School Comparison average.

Falls Far Below Standard:
$\square$ Charter school performance is 10 or more percentage points below the Assigned School Comparison average.

## Measure 2f.2. 9th Grade on Track-Subgroup-ASC Comparison to district schools that charter school students would otherwise attend

Percentage of first time 9th graders who earned all credits attempted.

## Necessary data

For charter school and district schools charter school students would otherwise attend:

- Number of students "assigned" to each ASC district school (see Table 1 for example)
- Subgroup 9th grade on track rates for all eligible subgroups reported in the Washington School Improvement Framework
Note: "Eligible" subgroups meet OSPI reporting standards for the number of students tested.

## Methodology (carried out separately for each eligible subgroup)

Step 1: Multiply the subgroup 9th grade on track rate for each assigned school by the number of students who would otherwise attend the school. Sum the products for all assigned schools and divide by the total number of students in the charter school. The result is the Assigned School Composite (ASC).
Step 2: Calculate the difference between the charter school subgroup $9^{\text {th }}$ grade on track rate and the ASC subgroup $9^{\text {th }}$ grade on track rate.
Step 3: Apply targets from the table below to assign performance category.
Note: Applies to all schools serving students in $9^{\text {th }}$ grade.

## Targets

2f.2. 9th Grade on Track (HS) - Subgroup - Comparison to assigned schools
How do charter school student subgroup 9th grade on track (HS) rates compare to the district schools that students would otherwise attend if they did not attend the charter school?

## Exceeds Standard:

$\square$ Charter school subgroup performance is 10 or more percentage points above the Assigned School Comparison average.

## Meets Standard:

Charter school subgroup performance equals or is up to 9 percentage points above the Assigned School Comparison average.Does Not Meet Standard:Charter school subgroup performance is up to 9 percentage points below the Assigned School Comparison average.
Falls Far Below Standard:
$\square$ Charter school subgroup performance is 10 or more percentage points below the Assigned School Comparison average.

## Measure 2g.1. Dual Credit—ASC Comparison to district schools that charter school students would otherwise attend

Percentage of students in grades 9-12 who completed a dual credit course or program.

## Necessary data

For charter school and district schools charter school students would otherwise attend:

- Number of students assigned to each ASC district school (see Table 1 for example)
- Dual credit rates

## Methodology

Step 1: Multiply the dual credit rate for each assigned school by the number of students who would otherwise attend the school. Sum the products for all assigned schools and divide by the total number of students in the charter school. The result is the Assigned School Composite (ASC).

Step 2: Calculate the difference between the charter school dual credit rate and the ASC dual credit rate.
Step 3: Apply targets from the table below to assign performance category.
Note: Applies to all schools serving students in 9th grade.

## Targets

## 2g.1. Dual Credit (HS) - Comparison to assigned schools

How do charter school student dual credit (HS) rates compare to the district schools that students would otherwise attend if they did not attend the charter school?

## Exceeds Standard:

Charter school performance is 10 or more percentage points above the Assigned School Comparison average.

## Meets Standard:

$\square$ Charter school performance equals or is up to 9 percentage points above the Assigned School Comparison average.

Does Not Meet Standard:
Charter school performance is up to 9 percentage points below the Assigned School Comparison average.
Falls Far Below Standard:
$\square$ Charter school performance is 10 or more percentage points below the Assigned School Comparison average.

## Measure 2g.2. Dual Credit—Subgroup-ASC Comparison to district schools that charter school students would otherwise attend

Percentage of students in grades 9-12 who completed a dual credit course or program.

## Necessary data

For charter school and district schools charter school students would otherwise attend:

- Number of students "assigned" to each ASC district school (see Table 1 for example)
- Subgroup dual credit rates for all eligible subgroups reported in the Washington School Improvement Framework
Note: "Eligible" subgroups meet OSPI reporting standards for the number of students tested.

## Methodology (carried out separately for each eligible subgroup)

Step 1: Multiply the subgroup dual credit rate for each assigned school by the number of students who would otherwise attend the school. Sum the products for all assigned schools and divide by the total number of students in the charter school. The result is the Assigned School Composite (ASC).

Step 2: Calculate the difference between the charter school subgroup dual credit rate and the ASC subgroup dual credit rate.
Step 3: Apply targets from the table below to assign performance category.
Note: Applies to all schools serving students in $9^{\text {th }}$ grade.

## Targets

## 2g.2. Dual Credit (HS) - Subgroup - Comparison to assigned schools <br> How do charter school student subgroup dual credit (HS) rates compare to the district schools that students would otherwise attend if they did not attend the charter school?

Exceeds Standard:
Charter school subgroup performance is 10 or more percentage points above the Assigned School Comparison average.
Meets Standard:
$\square$ Charter school subgroup performance equals or is up to 9 percentage points above the Assigned School Comparison average.

Does Not Meet Standard:
$\square$ Charter school subgroup performance is up to 9 percentage points below the Assigned School Comparison average.

Falls Far Below Standard:
$\square$ Charter school subgroup performance is 10 or more percentage points below the Assigned School Comparison average.

## INDICATOR 3: SCHOOL-SPECIFIC GOALS

## Measure 3a. Did the charter school meet its school-specific academic goals?

Overview: School-specific goals must be measurable, based on valid and reliable sources, and should encompass performance outcomes. The Commission will consider the appropriateness and feasibility of assessing school-specific measures before including them in the academic performance framework.

Data source(s): Data sources and verification processes will be established as part of the approval of school-specific measures.

Targets

> 3a. Did the charter school meet its school-specific academic goals?
> Note: Specific metric(s) and target(s) must be developed and agreed upon by the charter school and the authorizer.

## Exceeds Standard:

The charter school exceeds its school-specific academic goal(s).
## Meets Standard:

$\square$ The charter school meets its school-specific academic goal(s).

## Does Not Meet Standard:

The charter school does not meet its school-specific academic goal(s).Falls Far Below Standard:The charter school falls far below its school-specific academic goal(s).

## CREATING MEASURE RATINGS, INDICATOR RATINGS AND AN OVERALL RATING (TIER)

## Calculating Measure ratings

Each measure in the academic framework receives one of four ratings: Exceeds Standard, Meets Standard, Does Not Meet Standard or Falls Far Below Standard. Points are assigned to the school based on the rating category earned:

| Rating Category | Points earned |
| :--- | :--- |
| Exceeds Standard | 100 points |
| Meets Standard | 75 points |
| Does Not Meet Standard | 50 points |
| Falls Far Below Standard | 25 points |

For example, a school that "exceeds" the performance target for a measure would receive 100 points for that measure.

## Calculating aggregate measure ratings

Many of the APF measures have one or more "sub-measure" ratings that must be aggregated or rolled up to a measure rating. For example, Measure $2 a 1$ evaluates both ELA and math proficiency, and Measure 2a2 evaluates both ELA and math proficiency for up to $\mathbf{1 2}$ subgroups.

Points for sub-measure ratings are averaged and assigned a measure rating, using the following point ranges (the lowest score a school can receive is 25 points):

| Category | Points Range |
| :--- | :--- |
| Exceeds Standard | 88 to 100 points |
| Meets Standard | 63 to 87.9 points |
| Does Not Meet Standard | 38 to 62.9 points |
| Falls Far Below Standard | 25 to 37.9 points |

While a school receives an aggregated rating, annual reports will display disaggregated results, and results for all subgroups and sub-measures will be reviewed by the Commission.

Example: Subgroup Comparison to District Schools that Charter School Students Would Otherwise Attend

| Subgroup | Subject | School Proficiency Rate | District Proficiency Rate | Sub-measure rating | Points Earned |
| :---: | :---: | :---: | :---: | :---: | :---: |
| American Indian/Alaskan | ELA | 21\% | 32\% | F | 25 |
| Native | Math | 13\% | 20\% | D | 50 |
| Black/African American | ELA | 29\% | 34\% | D | 50 |
|  | Math | 18\% | 16\% | M | 75 |
| Hispanic/LatinX | ELA | 32\% | 34\% | D | 50 |
|  | Math | 23\% | 21\% | M | 75 |
| Native Hawaiian/other | ELA | 22\% | 12\% | E | 100 |
| Pacific Islander | Math | 19\% | 8\% | E | 100 |
| EL | ELA | 6\% | 10\% | D | 50 |
|  | Math | 14\% | 20\% | D | 50 |
| Low Income | ELA | 35\% | 38\% | D | 50 |
|  | Math | 38\% | 42\% | D | 50 |
| SPED | ELA | 11\% | 22\% | F | 25 |
|  | Math | 6\% | 5\% | M | 75 |
| Male | ELA | 34\% | 39\% | D | 50 |
|  | Math | 40\% | 37\% | M | 75 |
| Female | ELA | 41\% | 53\% | F | 25 |
|  | Math | 42\% | 40\% | M | 75 |
| Average Score: <br> Measure Rating: |  |  |  |  | 58 |
|  |  |  |  |  | D |

In the example above, the school has a range of sub-measure ratings, which result in an aggregated measure result of "Does Not Meet Standard."

## Calculating Indicator and overall Ratings

To aggregate scores from all the measures into indicator ratings and then into an overall rating (tier), the score for each measure is weighted according to the table below.

| INDICATOR | MEASURE |  | Weight |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | K-8 | HS |
| 1. State and Federal | 1a.1. All Students Framework Score |  | 25\% | 25\% |
| Improvement Framework | 1a.2. Subgroup Framework Scores |  | 25\% | 25\% |
| 2. Geographic Comparisons (Assigned School Comparison) | 2a.1. Proficiency | 2a.2. Subgroup Proficiency | 10\% | 10\% |
|  | 2b.1. All students growth | 2b.2. Subgroup growth | 20\% | NA |
|  | 2c.1. Graduation Rate | 2c.2. Subgroup Graduation Rate | NA | 15\% |
|  | 2d.1. EL Progress | 2d.2. Subgroup EL Progress | 2.5\% | 2.5\% |
|  | 2e.1. Regular Attendance | 2e.2. Subgroup Regular Attendance | 2.5\% | 2.5\% |
|  | 2f.1. 9th Graders on Track | 2f.2. 9th Graders on Track | NA | 2.5\% |
|  | 2g.1.Dual Credit | 2g.2. Dual Credit | NA | 2.5\% |
| 3. School-specific goals | School-specific goal(s) |  | 15\% | 15\% |

Note: 9th Graders on Track and Dual Credit are evaluated for all schools serving 9th grade.
Note: Weights across all indicators total to 100\%.

First, a weighted average of the points earned on measures within each indicator is calculated, and an indicator rating is assigned based on the table below. Next, a weighted average of the indicator rating points is calculated, and each school is assigned to one of four tiers, according to the table below. The same point ranges are used to assign both indicator ratings and overall tiers.

| Overall <br> Tier | Indicator Rating | Points Range |
| :---: | :---: | :---: |
| 1 | Exceeds Standard | 88 to 100 points |
| 2 | Meets Standard | 63 to 87.9 points |
| 3 | Does Not Meet Standard | 38 to 62.9 points |
| $4^{*}$ | Falls Far Below Standard | 25 to 37.9 points |

*Consistent with RCW 28A. 710.200 (2), charter schools in the bottom quartile of schools on the Washington School Improvement Framework will automatically be assigned to Tier 4, regardless of total points.

Note on missing data: If a school does not have at least one year of SBA data or if one or more of the three indicators is missing, an overall tier rating will not be calculated.

## Appendix

## Example - Assigned School Composite <br> Measure 2a. 1

The sample school below is a charter school with proficiency results for grades 6 through 8 . The students at the charter school live in the school boundaries for three district schools. The percentage of charter school students assigned to each district school is presented in the table below.

| School | Percentage of Charter School's Students "Assigned" to School |  |  |
| :---: | :---: | :---: | :---: |
|  | Grade 6 | Grade 7 | Grade 8 |
| Assigned School A | $1 \%$ | $15 \%$ | $16 \%$ |
| Assigned School B | - | $18 \%$ | $15 \%$ |
| Assigned School C | $17 \%$ | $18 \%$ | - |

To calculate the Assigned School Composite for overall school proficiency, the grade level proficiency rates of each of the assigned schools are weighted by the number of charter school students assigned to each of the schools, by grade.

| Assigned School | Grade | Number of students assigned to school and grade | Percentage of Students Proficient at School |
| :---: | :---: | :---: | :---: |
| School A | 6 | 2 | 88.9\% |
| School A | 7 | 30 | 63.4\% |
| School A | 8 | 33 | 66.5\% |
| School B | 7 | 36 | 62.1\% |
| School B | 8 | 30 | 65.7\% |
| School C | 6 | 34 | 68.6\% |
| School C | 7 | 37 | 76.9\% |
|  |  | 202 | -- |
| $\underline{(2 \times 88.9}$ | 63.4\%) | School Composite Average: 67 .5\% $+(36 \times 62.1 \%)+(30 \times 65.7 \%)$ | $\begin{aligned} & 6 \% \\ & +(34 \times 68.6 \%)+(37 \times 76.9 \%) \end{aligned}$ |
| 202 |  |  |  |
